

Anti Malaria Month & Anti Dengue Month-June, July 2021

Awareness Program for Housekeeping & Sanitation Staff

Department of Community Medicine, GIMSAR

As little as one teaspoon or bottle cap of water standing for more than one week is enough for mosquitoes to breed and multiply.

At your house or business:
 Put away items that are outside and not being used because they could hold standing water.

In your garden:
 Keep flower pots and saucers free of standing water. Some plants, such as bromeliads, hold water in their leaves—flush out water-holding plants with your hose once a week.

Around all buildings:
 At least once a week, empty, turn over or cover anything that could hold water:

- tires
- buckets
- toys
- pools & pool covers
- birdbaths
- trash, trash containers and recycling bins
- boat or car covers
- roof gutters
- coolers
- pet dishes
